

$$* \quad \begin{array}{r} 4 - 5m = p \\ -4 \quad \quad -4 \end{array} \quad \text{solve for } m$$

$$\frac{-5m}{-5} = \frac{p-4}{-5}$$

$$m = \frac{p-4}{-5} \quad \checkmark$$

$$m = (p-4) \div (-5) \quad \checkmark$$

$$m = (p-4) \left(-\frac{1}{5}\right) \quad \checkmark$$

$$m = \left(-\frac{1}{5}\right)(p-4) \quad \checkmark$$

$$m = -\frac{1}{5} \cdot p + \left(\frac{1}{5}\right) \left(\frac{4}{1}\right) \quad \checkmark$$

$$m = \frac{-p}{5} + \frac{4}{5} \quad \checkmark$$
