Evaluate $-5x^3 + 2x^2y - 9y^2$

when $x = -2$ $y = -3$

$$-5(-2)^3 + 2(-2)^2(-3) - 9(-3)^2$$

$$-5(-2)(-2)(-2) + 2(-2)(-2)(-3) - 9(-3)(-3)$$

$$-5(-8) + 2(-12) - 9(9)$$

$$40 - 24 - 81$$

$$16 - 81$$

$$-65$$
